## Publisher's Note

The *History of Science, Health, and Women* is a microfilm publication derived from the *History of Women* collection, with additional selections drawn from the *European Women's Periodicals* and *The Malthusian*<sup>1</sup> collections. It contains 148 titles, selected and introduced by Alice D. Dreger, Ph.D., Assistant Professor of Science and Technology Studies, Lyman Briggs School, and Adjunct Professor, Center for Ethics and Humanities in the Life Sciences, Michigan State University. The Sophia Smith collection at Smith College and the Schlesinger Library at Radcliffe College are the two renowned women's history archives that form the core of this microfilm collection. Other contributing institutions include Harvard University, Yale University, New York Public Library, Boston Public Library, Jane Addams Hull House Library, the McPherson Collection at Scripps College, Chicago Circle, the Miriam Y. Holden Collection, the Internationaal Instituut voor Sociale Geschiedenis (IISG) and the Internationaal Informatiecentrum en Archief voor de Vrouwenbeweging (IIAV) in Amsterdam, and the British Library of Political and Economic Science.

### Reels

At the beginning of each reel, a "Contents of Reels" section is included, allowing users to locate documents without the printed guide in hand. The number preceding each entry corresponds to the item number originally assigned to the *History of Women* collection. Titles that are included both in the Gerritsen and the *History of Women* collections have been placed in reel 12. The additional selection of periodicals is located in the last reels (reels 19 through 23).

### About this guide

This guide contains seven sections:

- **Foreword**

Written by Cristina Favretto, Director of the Center for Women's History and Culture, and Women's Studies Bibliographer, Rare Book, Manuscript, and Special Collections Library at Duke University, this foreword introduces *The History of Science, Health, and Women* as well as the two other derivatives available from Primary Source Microfilm: *The Social and Cultural Construction of Girls and Women and World War I*.

- **Introduction**

Alice D. Dreger provides a detailed introduction to the collection contents, detailing how they can be used in research and teaching. Location of the documents quoted is indicated in parenthesis, the first number corresponding to the reel number and the second one to the item number.

- **Author/Title Listing**

This section, arranged alphabetically, contains the bibliographic information for each title. At the end of each entry, the reel and item location numbers appear in italics.

---

<sup>1</sup> **A NOTE ON THE USE OF THE CONTENTS OF THE MALTHUSIAN FOR SCHOLARLY PURPOSES (REELS 20 THROUGH 23)**

Scholars are requested to inform the British Library of Political and Economic Science, 10 Portugal Street, London WC2A 2HD, of any research undertaken making use of the material in this edition. Scholars are also requested to send to the Library notification and, where possible, copies of any books, articles or other publications which feature references to the material in this edition.

- **Periodicals**

This section, arranged alphabetically, contains the bibliographic information for each periodical. At the end of each entry, the reel numbers appear in italics. Periodicals selected from the *History of Women* collection are included on reels 13 through 18, reel 19 for *European Women's Periodicals* and reels 20 through 23 for *The Malthusian*.
- **Contents of Reels**

This section lists all books, pamphlets, lectures, and reports entries (reels 1-13) followed by the periodicals entries (reels 13-23). At the end of each entry, the reel and item location number also appear in italics.
- **Author Index**

Arranged alphabetically, this index allows the user to locate easily authors and works across the collection. The numbers following the entry represent the reel number followed by the item number.  
Ex: Abbott, Maude Elizabeth Seymour [Author]: 8 [Reel Number], 8609 [Item Number]
- **Subject Index**

Also arranged alphabetically, this index enables the user to narrow a search using specific terms. The numbers following the entry represent the reel number followed by the item number.  
Ex: Abortion [Subject]: 4 [Reel Number], 2077 [Item Number]

## Foreword

*By Cristina Favretto, Director of the Center for Women's History and Culture, and Women's Studies Bibliographer, Rare Book, Manuscript, and Special Collections Library at Duke University*

Primary Resource Microfilm is making available three very important sources for the study of Women's History topics: *The Social and Cultural Construction of Girls* (editor: Jane Hunter), *The History of Science, Health, and Women* (editor: Alice Dreger), and *Women and World War I* (editor: Margaret Higonnet). These collections will offer unprecedented access to primary, rare sources of materials which have often been “weeded out” of library collections, or have often never been purchased for academic libraries. Researchers in the fields of history, literature, women's studies, sociology, the history of medicine, political science, and gender and sexuality studies will be fascinated by the trove of heretofore hard to find resources.

As a resource specialist for women's studies as well as an archivist, I have witnessed the frustration of researchers confronted with the need to use primary sources when none were available. Topics dealing with women's history and culture have, traditionally, not been collected as methodically and completely as those dealing with men's topics; and rare and out-of-print books on women and the war experience, “girls' culture”, and women and medicine are not commonly found on the shelves of most academic institutions. This “fugitive” literature has, however, experienced a surge of interest in the academic world. Research topics that have to deal with the quotidian aspects of women's domestic and social lives are fast becoming a mainstay within many interdisciplinary strands of scholarly research. There is, furthermore, a need to explore these topics in depth and from a historically contemporary perspective. These three collections will prove essential in filling the gaps left in these fields by the absence or unavailability of both primary and rare or out-of-print materials.

The *Social and Cultural Construction of Girls* collection will aid in illuminating views and expectations of young girls in popular advice literature, as well as explicating the limitations of girls' roles in society. There has been a veritable surge of interest in this “prescriptive” literature, as attested by the many recent offerings of research literature on this topic. Texts from the eighteenth and nineteenth centuries that explore the transitional period between girlhood and womanhood are quite rare in their original editions. They can be seen as veritable “how to” books that often used manipulative imagery to educate, castigate and define boundaries—but that are also in some rare instances empowering and truly instructive.

The *History of Science, Health, and Women* collection will make available the works of authors who were celebrated in their time, but now virtually unknown. These authors include William Andrus Alcott—cousin to the better known Bronson Alcott, father of Louisa May—and an early advocate of vegetarianism, the outspoken social critic Anna Laetitia Barbauld. This collection includes difficult to find items on women's diseases as seen through the lens of Victorian Morality, as well as household advice books aimed at young mothers, treatises on venereal diseases and prostitution, and books on the advisability of women doctors. This important collection is recommended for all academic libraries, and highly recommended for medical school libraries

*Women and World War I* aids the serious researcher in documenting the relatively unexplored field of scholarship on women's contribution to the war effort, as evinced in the literature published by and about women in WWI. Up to now, women's roles in the world wars has been viewed almost exclusively as the work of WAACS and ambulance drivers; these books allow us to investigate women as journalists, as analyzers of the war effort, and as effective organizers on both the war and home fronts. Documents from the Young Women's Christian Associations, the Wellesley College Training Camp for the Women's Land Army of America, and from personal collections—correspondence, diaries, and autobiographical memoirs—prove invaluable in shedding light on the topic of women's lives and work in war time.

These three collections of primary and hard-to-find secondary sources will be widely used in academic libraries, and they will prove invaluable sources for scholars and researchers in a great variety of disciplines. The availability of these three collections will be welcomed as another step forward in uncovering important sources in the exploration of women's forgotten, neglected, or undocumented histories.

## Introduction

*By Alice D. Dreger, Ph.D., Michigan State University*

The *History of Women* collection from Primary Source Microfilm is comprised of a rich variety of texts touching on virtually all major aspects of women's experiences. The *History of Science, Health, and Women* derivative provides a fascinating collection of nineteenth- and early-twentieth-century texts from Europe and the United States. The books, pamphlets, lectures, reports, and periodicals that make up the derivative treat issues ranging from women's education and participation in science, mathematics, medicine, midwifery, home health care and personal health; to medical issues specific to women, such as menstruation, pregnancy, birth, nursing, menopause and "female" diseases; to scientific social movements affecting women, including dress reform, temperance, social hygiene, industrialization, birth control and eugenics.

Together these texts provide a fine sense of the way in which medical and scientific matters have reflected larger social concerns and debates, such as the question of the proper roles of girls and women in a civilized state. Too often researchers and educators have separated the history of science and medicine from the history of women. This collection makes clear just how embedded one is in the other and, how much more sophisticated an understanding both professional and novice students of history can achieve if they recognize and explore the intertwining of these realms.

### Histories of "Great Women"

The earliest histories of women's interactions with science and medicine tended to be "Great Women" histories, explicit responses to the "Great Man" histories of science and medicine that for their part implied women only ever acted in science and medicine—if they acted at all—as subjects. This *History of Women* collection contains several early "great women" histories. These kinds of histories, typically written by women, functioned not only to show that women could make important contributions to science and medicine (as well as politics, art, and so on), but also to counter the general sentiment that women, by their nature, were passive, non-intellectual, and unable to lead or think independently. So Mary Clarke Cowden's 1858 collection of biographies entitled *Noted Women, or Types of Womanly Attributes from All Lands and Ages* contains—alongside biographies of Pocahontas, Joan of Arc, and Cleopatra—a biography of Florence Nightingale (4, 1668)<sup>2</sup>. This celebration of Nightingale by her contemporary functioned as an evidentiary response to medical and scientific men like Charles Delucana Meigs, M.D.

Just a decade before Cowden's collection was published, Meigs claimed in his "Lecture on Some Distinctive Characteristics of the Female" that "the administrative faculties are not [woman's]. . . . She

reigns in the heart; her seat and throne are by the hearthstone.... Home is her place” (3, 9991, pp. 9-10). Cowden’s account of Nightingale’s administrative achievements clearly shows otherwise.

The collection also contains the writings of these “great women” themselves, including Florence Nightingale. For example, Nightingale’s “Notes on Nursing: What It Is, and What It Is Not” explores how nurses should behave and be seen (5, 2366). For those scholars and students who know Nightingale primarily as the mythical and silent “lady with the lamp,” reading Nightingale’s own words will bring to life her insistent and engaged voice, her active and challenging agitation for the professionalization of nursing. Nightingale recognized the long-standing association of nursing with femininity; she observed, in 1860, that “Every woman... has, at one time or another of her life, charge of the personal health of somebody, whether child or invalid—in other words, every woman is a nurse” (5, 2636, p. 3). Still, Nightingale wanted the public to understand the difference between the lay and the professional nurse.

Getting the populace to recognize the legitimacy of women physicians proved a much harder task. Perhaps the long history of the gendered perceptions of nurses and doctors explains why Nightingale, a nursing reformer and nurses’ advocate, is still popularly recognized at a level that Elizabeth Blackwell—Nightingale’s counterpart in the realm of physicians—is not. Fortunately, the work of the prodigious Blackwell, one of the first women to earn an M.D. and practice as a physician, is well represented in this collection. Blackwell’s “Address on the Medical Education of Women” (5, 8716) and the autobiographical *Pioneer Work in Opening the Medical Profession to Women* (8, 3855.1) allow one to trace her attempts to provide education and positions for women seeking to be physicians. One can also explore via this collection Blackwell’s idiosyncratic philosophy of public health in such gems as *The Religion of Health* (7, 9997) and *The Laws of Life, with Special Reference to the Physical Education of Girls* (3, 1627).

### **Women in the Medical Profession**

Backing up and rounding out the manifestos and contemplations of leaders like Nightingale and Blackwell, this collection also contains statistical and narrative reports of women’s colleges and professional schools, women health professionals and women’s hospitals. Scholars interested in these institutions should consider, for example, the “First Report of the Woman’s Hospital Association” of New York City published in 1856 (3, 9992), or Dr. Anita Newcombe McGee’s 1902 study of “The Nurse Corps of the Army” (9, 10001).

---

<sup>2</sup> Location of the documents quoted is indicated in parenthesis, the first number corresponding to the reel number and the second one to the item number. When available, the item number is followed by the page number.

In her fascinating 1881 survey of American women physicians, Dr. Emily F. Pope recorded career lengths of women physicians from various generations and asked women physicians to respond to common arguments against women becoming physicians, such as the claim that it ruined their own health. Pope's subjects refuted the ideas that women physicians neglect their families and that "the peculiar physiological organization of woman must unfit her to bear mental or physical strain at certain periods" ("The Practice of Medicine by Women in the United States," 7, 8551, p. 7).

The stories of the unsung pioneering medical women come through beautifully in these texts, particularly in *Daughters of Aesculapius, Stories Written by Alumnae and Students of the Women's Medical College of Pennsylvania* (8, 4972). This marvelous collection of ten stories promises to tell historians much about the lives of early women physicians in medical school, in the hospitals and at the bedside. B. Rosalie Slaughter, class of 1897, contributed the fictional story "One Short Hour," in which Rachel, a dedicated medical student, is forced by her beau Howard, an English professor, to choose between medicine and marriage. Rachel, frustrated by Howard's inability to see how her medical career will enrich both their lives, tries to explain to him that she can love and care for both him *and* her profession. "Have I not said I loved you?" she asks him. "Did you not find my book resting on your letter?"

"Yes," he responds, "but the book was on top!" (p. 70) Indeed, in the end, the book remains on top. At the story's close, Rachel bids Howard farewell, choosing medicine. The use of a narrative such as this one would immediately wake up students to how different the lives of women students were a century ago and, indeed, remind them that women in some ways are still obligated to struggle with the "family and career" duality.

### **Woman's Ideal Nature, Women's Real Roles**

Mercifully, this collection contains relatively few of the multitude of texts published by male scientists and physicians who spoke only of the weaker, less rational and more domestic nature of woman—the kind of texts readily found in the collections of traditionally male medical schools—though we do find strands of this way of thinking. So, for example, the 1840 "Introductory Address" by Chandler Robbins Gilman, lecturer on obstetrics and disease of women and children, "to the Students in Medicine of the College of Physicians and Surgeons of the University of the State of New York" does contain a rather romantic and oppressive celebration of woman's goodness (2, 8686). Meanwhile, an 1873 book by medical man Jerome Van Crowninshield Smith warns of the "imperfect development of women" and the dangers of women "overworking the brain" (*The Ways of Women in Their Physical, Moral, and Intellectual Relations*, 6, 2969).

These sorts of (occasionally misogynistic) tracts are commonly available, and so perhaps of far more interest to most scholars will be the texts written by both women and men aimed at teaching lay women about the health care of themselves and their families. In his 1842 *Hints to Mothers, for the Management of Health During the Period of Pregnancy, and in the Lying-in Room (etc.)*, Thomas Bull advises women about how to avoid the physical and cultural pitfalls associated with pregnancy. For

example, he tells his readers not to let themselves become “truly wretched” from the myths about maternal impressions, that is, the idea that a mother’s fears and desires will physically mark the child she

is carrying (2, 1282, p. 11). This is not to say that these sorts of myths were not generally persistent and frequently endorsed in such “self help” books. *The Young Married Lady’s Private Medical Guide* of 1854 warns against too much “self pollution” (masturbation), lest a woman wind up suffering from “general languor and debility; more feeble intellectual powers, with moments of absent mindedness; treacherous memory; dizziness; the eye surrounded with a dark, livid circle; pupils of the eyes habitually dilated; indifference and aversion to objects which excite the attention of others; fatiguing palpitations,” and so on (3, 1706, p. 171).

Many of these “how to” texts acknowledged and supported the role of women as the primary health care providers to their families and treated their readers as intelligent soldiers of public health reform. So, for example, *The Handbook of Household Science*, an 1857 text by Edward L. Youmans, explained theories of heat, colors, light, gasses and food in an effort to help women prevent diseases from invading their households (4, 2079). Similarly, the *Ladies’ Indispensable Assistant* of 1851 put forth a “complete system of family medicine,” that is, medicine to be administered by the woman of the house (3, 1843). The *Assistant* includes many recipes for medicinal cooking. Indeed, *The Maternal Physician*, published in 1811 and written “by an American matron,” takes as its primary thesis the belief that “Every mother is her child’s best physician” (2, 775). While claiming to hold in high esteem professional physicians, the author challenges their authority, remarking that “Facts . . . are not made by theory, but theory [is] created by facts,” the facts the nursing mother comes to know so well (p. 13).

Feminist historians and philosophers of science have been engaged of late in a discussion of “women’s ways of knowing,” and these texts provide excellent fodder for professional and classroom dialogues on this topic. In fact, besides the question of women’s ways of seeing and organizing the world, these texts raise the related question of the relationship of profession to authoritative knowledge. It is easy to imagine using this series to foment a very fruitful discussion among, for example, nursing and medical professionals and students, about what kinds of knowledge should count as legitimate, or about what kinds of people should be acknowledged as “primary health care providers.”

### **The Lives of “Ordinary” Women**

Another real value of this series is the way in which it provides windows into the worlds of the nameless “ordinary” women of various times and places. Thus *Sex in Industry*, a study by Dr. Azel Ames Jr., seeks to determine “the true relations sex sustains to industry,” and in doing so provides stories of girls and women working in factories in the 1870s (7, 2491). Fleetwood Churchill’s 1858 textbook, *On the Theory and Practice of Midwifery*, recounts his own and colleague’s personal experiences and in doing so captures second-hand the stories of the women being treated. Some of these windows are statistical in nature; thus we can learn of the average physical height, weight, and so on, of girls and women of varying

ages in Henry Pickering Bowditch's *The Physique of Women in Massachusetts* (8, 10000), and of the health and medical treatment of women prisoners in Dr. Edith Rogers Spaulding's *The Results of Mental and Physical Examinations of Four Hundred Women Offenders, with Particular Reference to Their Treatment during Commitment* (11, 10002). These texts also provide excellent insight into the ways in which wealth and class shaped women's experiences.

### **Changing Women's Lives**

Pamphlets agitating for reform reveal much about the status quo, and this collection includes a marvelous array of reform literature. Consider, for example, the work of the dress reformist, Harriet N. Austin, M.D. In *The American Costume, or Woman's Right to Good Health* (1867), Austin records in great detail the style of and problems with her contemporaries' garments (5, 9993). A pamphlet put out by the Chicago Society for Social Hygiene "For the Protection of Wives and Children from Venereal Contamination" contains sixteen vignettes of the horrible things that happened to virginal women who married men infected with gonorrhea and syphilis (12, 9945).

Particularly well represented in this collection, in terms of reform literature, is the birth control movement. These documents are exceptionally lively, full as they are of moving personal stories and intense political rhetoric. The socialist Teresa Billinton-Greig's 1914 address, "Commonsense on the Population Question," blames everything from war to the low intelligence of the nation's children on the lack of birth control (11, 9974). Father Michael P. Dowling responds a year later with the common lament that birth control will lead not only to moral decay but to "race suicide" ("Race-Suicide, Birth-Control," 11, 9975).

One text captures especially well the way in which unchecked fertility affected the whole family; this is John Humphrey Noyes's "Male Continence," an 1877 text aimed at teaching men how to avoid conception. Noyes, devastated by the thought of physically and emotionally harming his wife with yet another pregnancy, chose to practice "male continence," i.e., sexual intercourse without ejaculation. Besides arguing that male continence is neither dangerous (as some medical doctors claimed) nor immoral (as some Christians claimed), Noyes noted that by practicing male continence, "my enjoyment [of sex] was increased; that my wife's experience was very satisfactory, as it had never been before" (6, 9963, p. 13). Scholars and students struggling with issues of present-day law as it relates to gender and sexuality will do well to study for comparison purposes these birth control texts and the history of legal prohibitions against contraception. Many of the arguments for and against birth control mirror arguments made today for and against, for example, gay marriage.

## Beyond Narrow Histories

The user of this fine series—whether s/he be a scholar, a teacher, or both—is encouraged to consider how these texts should and can be used well beyond the relatively narrow disciplines of the history of science and medicine. Yes, Margaret Sanger's 1917 pamphlet on "Family Limitation" contains a nurse's prescription for contraception, but it also captures beautifully the early rumblings of feminist championing of the sexual pleasure of women. (Sanger disliked coitus interruptus not only because it is unreliable as birth control, but also because it often ends intercourse before a woman is satisfied; (12, 9989). Yes, Henrietta I. Goodrich's 1900 pamphlet is ostensibly about "A Possible Alleviation of Present Difficulties in Domestic Service" and ways that scientific approaches to food preparation and delivery could solve these difficulties, but it also provides an intense sense of how men's and women's lives were changing at the start of the twentieth century because of industrialization (8, 8574). Thus, the derivative collection of primary sources on the *History of Science, Health, and Women* should be understood as just that—a derivative—of a much larger history. The derivative functions as an excellent entry point to that vast world.

## Author/Title Listing

**Abbott, Maude Elizabeth Seymour, 1869- 1940**

Women in medicine. Toronto, Morang & co. [n.d.]  
*Reel 8, No. 8609*

**Alcott, William Andrus, 1798- 1859**

The young mother; or, Management of children in regard to health. Boston, Light & Stearns, 1836.  
*Reel 12, No. 961*

**Alcott, William Andrus, 1798- 1859**

The young woman's book of health. New York and Auburn, Miller, Orton & Mulligan, 1855 [c1850]  
*Reel 3, No. 1585*

**[Alcott, William Andrus], 1798- 1859**

The physiology of marriage. By an old physician. Fifteenth thousand. Boston, J. P. Jewett & co.; Cleveland, Ohio, Jewett, Proctor & Worthington; New York, Sheldon [etc.] 1856.  
*Reel 3, No. 1584*

**American Social Hygiene Association**

The American Social Hygiene association, 1914-1916. New York City, 1916.  
*Reel 11, No. 9926*

**Ames, Azel, 1845- 1908**

Sex in industry: a plea for the working-girl. Boston, J. R. Osgood and company, 1875.  
*Reel 7, No. 2491*

**Amos, Sheldon, 1835- 1886**

A concise statement of some of the objections to the Contagious diseases acts of 1864, 1866, and 1869, dealing with the argument up to the present time (1876) ... London, W. Ridway, 1876.  
*Reel 7, No. 2497.1*

**Arner, George Byron Louis, 1883-**

Consanguineous marriages in the American populations ... [New York] Columbia University, 1908.  
*Reel 10, No. 5633.1*

Association for maintaining the American women's table at the zoological station at Naples & for promoting scientific research by women. (n.p. 1903?)  
*Reel 9, No. 5026*

**Association for the relief of aged women of New Bedford, Mass.**

Constitution, by-laws, and rules of the Association for the relief of aged women of New Bedford. New Bedford, Mercury Job Press, 1866.  
*Reel 5, No. 8414*

**Association for the relief of aged, indigent women of Portland, Maine**

Constitution and by-laws of the Association for the relief of aged, indigent women of Portland. Portland, Printed by C. S. King, 1862.  
*Reel 5, No. 8410*

**Association of Collegiate Alumnae**

Sanitary science club. Home sanitation. Boston, Ticknor and Company, 1887.  
*Reel 8, No. 3088*

**Association of Collegiate Alumnae. Special Committee**

Health statistics of women college graduates. Report of a special committee ... Annie G. Howes, chairman. Together with statistical tables collated by the Massachusetts bureau of statistics of labor. Boston, Wright & Potter, 1885.  
*Reel 7, No. 3087.1*
